

**To: All Motorola Europe, Middle East & Africa Approved Channel Partners**  
**Re: Changes to Batteries and Single Unit Chargers**

The European Union (EU) defines Directives that harmonise regulatory standards in order to help ensure suppliers of electronic goods meet minimum levels of quality and safety. All products offered for sale in the EU must meet the regulatory requirements set down. Failure to comply means a product may have to be removed from the market, or in extreme cases, may even lead to a fine and/or imprisonment.

Periodically, the Directives relevant to the batteries and battery-chargers used in Motorola Professional and Commercial portable radios are updated by the EU. In order to ensure that all of our products continue to meet the latest versions of the requirements, we are making some changes that mean many of the part numbers in use today will be cancelled and replaced by new versions. This applies to option numbers used when ordering as part of a radio and also the accessory number used when ordering the battery or charger standalone. Once the changes are made, the new part numbers must be used where the requirement is for CE-marked products. The changes to batteries only impact currently shipping radios – no changes are being made for battery parts for legacy, cancelled radios.

We are also standardising the methodology used for quoting battery capacities. Currently, some battery descriptions quote maximum, some minimum and some an average. The new descriptions will all quote typical capacity which gives a truer indication of the actual capacity that would be observed.

Finally, we are also improving the ordering flexibility for Commercial Series portables so you can select from a range of battery and charger options when you order the radio. These new battery and charger options will replace the previous fixed configurations. Over the next three months, it will still be possible to order a Commercial Series portable radio without a battery (by using the “delete battery” option number), but from mid-March 2011, this will no longer be possible and all portable radios will be supplied with a battery.

The new batteries and chargers will continue to meet the same or better specifications as the previous models, but will have different part numbers in order to allow easy identification. The following pages give details of the changes being made to each radio family and show the new part numbers that should be used in the future.

Contact your local Account Manager or Customer Care team if you have any questions.

# MOTOTRBO

Impact: All countries: Changes are being made to all MOTOTRBO batteries and chargers.  
 Date: Changes will be made on depletion of current inventory – expected to be November/December.

# COMMERCIAL SERIES – CP040

**Impact:** All countries: We are improving the bill of materials for Commercial Series portable radios to make the structure similar to the Professional Series. These changes mean that it will be possible to choose between a range of different battery and charger options when buying the CP040. It will be possible to buy the radio with no single unit charger, but from mid-March 2011, CP radios will not be supplied without a battery.

**Countries requiring CE marked product:** Changes are being made to all CP portable batteries and chargers.

**Countries not requiring CE marked product:** Changes are being made to CP chargers, CP batteries remain unchanged.

**Date:** Part numbers for current batteries will change as soon as possible to an interim number. The new batteries and chargers will then be introduced on depletion of current inventory – expected to be early 2011.

## Batteries

COMMERCIAL SERIES - CP040 Portable Radios						
		Current Part Number	New Interim Part Number	New Part Number	New Description	Notes
COUNTRIES REQUIRING CE MARKING	Option Number (ordered with radio)	---	QA02182AA	QA02094AA	ADD: CP BAT STD LI-ION 2250mAH CE	New battery
